Renewable energy power generation business

asset management

Tokyo Clean Power Management Co., Ltd.

We support the growth of renewable energy businesses in Japan, contributing to gains for investors and the achievement of a decarbonized society.

Tokyo Clean Power Management Co., Ltd. is a Tokyo Kyodo Accounting Office group company that provides asset management services related to the new renewable energy power generation business, partly in response to high levels of demand from numerous lenders, investors, and other parties since the enactment of the FIT Act.

Since its establishment, the company has earned a high reputation among stakeholders and has built up trust and a track record of commissions, and is entrusted with the operation and management of numerous sites.

Through its close alignment with Tokyo Kyodo Accounting Office, which has a strong track record of SPC management, Tokyo Clean Power Management Co., Ltd. provides highly efficient, quality services related to accounting, taxation, and cash management, as well as active and appropriate asset management and value-added services. These efforts will contribute to gains for investors, support the growth of renewable energy in Japan, and contribute to the achievement of a decarbonized society.

*FIT = Feed-in tariff system for renewable energy

Features of our services

Asset management for renewable energy power generation businesses

We are entrusted with the operation and management of renewable energy projects mainly large-scale solar power plants, known as mega solar power plants. In addition to conventional FIT projects, we will also actively take on the challenge of moving from conventional FIT projects to post-FIT projects, including those that use renewable energy sources besides mega solar energy.

Our services in the renewable energy project domain mainly focus on SPC operation and management services during projects, via SPC management, project finance measures, and accounting and taxation-based services. As a result, we have built a wide-ranging network and broad expertise related to renewable energy projects, covering areas such as energy market trends, solar power cell modules, PCS and other generation facilities, and new legal and regulatory trends related to the FIT Act and the Electricity Business Act.

In October 2020, the Japanese government declared its aim to achieve carbon neutrality by 2050. As a result, the market for renewable energy businesses is developing and diversifying away from conventional FIT projects, to include FIPs, corporate PPAs, aggregator businesses, capacity markets, and non-fossil value trading markets. At the same time, we are seeing frequent legal and regulatory revisions and developments, such as amendments to the FIT Act.

In response to this new global trend focused on decarbonization, we aim to leverage the expertise and trust from clients that we have accumulated since our establishment to expand our services beyond existing business domains.
